

The Finest PEA SEED Grown Begins Here...

at Corneli

ALASKA PETITE, W. R.

A brand-new Corneli introduction. Much like Garden Alaska, W. R., except sieve sizes are distinctly smaller even at high tenderometer readings.

Tenderness, yield and holding ability are at least equal to Garden Alaska, W. R.

If you pack peas, you like to be sure the seed you plant will give the best field performance and will contribute as much as seed can toward quality in the pack. Corneli KEYSTONE pea seed can give you this assurance, year after year.

On Corneli's Idaho pea breeding farm (pictured above) canning and freezing strains of peas are grown in long rows on wire for close observation—just one phase of a continuous program of crossing and selection

- to improve existing strains
- to develop new varieties
- to meet the changing needs of food processors.

DIXIELEE

... a new leader in Southern Peas!

Unsurpassed for market and home gardening
...and for commercial canning and freezing.

- ▶ **HIGHLY PRODUCTIVE** —under a wide range of soil and climatic conditions. The bunch to semi-bunch type plants bear several heavy sets of pods, which ripen uniformly. Roots are not attacked by nematodes.
- ▶ **EASY TO PICK** —the 8 inch pods, each containing about 19 peas, are borne on top of the plant, making hand or mechanical harvesting simple and fast.
- ▶ **SUPERB EATING QUALITY** —fresh, canned, or frozen. For variety, small green pods can be cooked with the shelled peas. When young, pods are tender, stringless, delicious.

Seeds are somewhat flattened and squarish in shape, similar to Purple Hull. Color is buff to light brown, with a brown eye.

Corneli produces Dixielee seed in isolated mountain valleys of the west, under irrigation. Thus, the seed you buy is pure, bright, and of high germination.

Order New Crop Dixielee Now...for prompt or deferred shipment.
